

ISO 42001 Compliance Readiness™

Accelerating AI Management System Documentation through Scan–Focus–Act

Your Challenge

Achieving readiness for **ISO/IEC 42001 Artificial Intelligence – Management System** is often slowed by fragmented documentation, unclear ownership, and limited stakeholder synchronization. Traditional compliance projects can take months, delaying outcomes and creating risk exposure.

Our Solution: Compliance Readiness Workshop™

AINNOLAB’s **2-day intensive workshop** leverages the proven **Scan–Focus–Act** methodology (originating from Capgemini’s accelerated delivery framework) to synchronize stakeholders, validate compliance artefacts, and co-create documentation in record time.

Using **Green–Amber–Red markers**, compliance documentation is pragmatically reviewed. “Amber” and “Red” areas are resolved live in the workshop, supported by **AINNOLAB’s Agent-Based Solution** and break-out group discussions. The output: validated artefacts, accelerated documentation, and a clear roadmap for completion.

What You Get

Category	Description
Compliance Artefact Validation	Rapid review of ISO/IEC 42001 clauses, controls, and requirements using Green–Amber–Red (RAG) scoring.
Interactive Workshop Delivery	2-day Scan–Focus–Act workshop with 10–15 participants across stakeholder groups.
Documentation Production	Break-out sessions and synthesis talks generate compliant drafts and align dependencies.
Agent-Based Support	AINNOLAB’s AI-powered assistants accelerate documentation and knowledge capture.
Roadmap and Risk Capture	Remaining artefacts, risks, and dependencies documented and visualized in a clear roadmap.

Your Key Benefits

- Cuts compliance preparation timelines from months to days
- Engages all relevant stakeholders in a **synchronized, pragmatic process**
- Produces **tangible compliance documentation** during the workshop itself
- Embeds **AI-assisted acceleration** for future reuse and scaling
- Creates clarity on outstanding risks and dependencies through a visual roadmap

Program Format

Duration: 2 days

Participants: 10–15 stakeholders (cross-functional) + AINNOLAB facilitation team

Method: Scan–Focus–Act accelerated workshop with breakout groups, synthesis talks, and AI agent support

Why choose AINNOLAB

- **Standards Expertise:** Deep knowledge of **ISO/IEC 42001** and related frameworks (ISO 23894, ISO 31000, AI Act).
- **Accelerated Delivery DNA:** Proven use of **Scan–Focus–Act** to compress timelines and deliver value in days, not months.
- **AI-Enabled Facilitation:** Agent-based assistants streamline documentation, reduce manual effort, and ensure traceability.
- **Pragmatic and Action-Oriented:** Outputs include ready-to-use compliance artefacts and a clear roadmap, not just recommendations.
- **Compliance-by-Design:** Workshop outputs are aligned with **EU AI Act obligations** and **ISO/IEC 42001 AIMS** practices, ensuring readiness for both regulators and auditors.

People-Centric Engagement: Interactive, inclusive sessions that synchronize diverse stakeholders and build ownership for compliance outcomes ✦ **Call to Action**

Discover how ISO 42001 Compliance Readiness can fast-track your AI compliance journey while embedding sustainable Ways-of-Working.
